

ELEVATE — Official Website Plan

This page defines what we are building for the Elevate Club website: the pages, features, content, admin system, and overall user experience.

1. Website Goal

The Elevate website will be the official digital platform of the club.

It should help students:

- Understand what Elevate is
- Explore our technical domains
- Discover events
- Learn from curated resources
- Participate in challenges
- Explore the history and leadership of Elevate
- Discover sponsors and partners
- Join/connect with Elevate

The website should feel like a growing technical community platform, not just a normal college club website.

Main user journey:

Discover Elevate → Explore Domain → Find Event → Learn → Participate → Join Community

2. Main Navigation

Main Navbar:

Home | Domains | Legacy | Events | Sponsors | Knowledge Hub | Challenges

Primary button:

Join Elevate

Optional:

The navbar will be responsive and become a mobile menu on smaller screens.

3. Home Page

The homepage introduces Elevate and gives users a preview of everything available on the website.

Sections

1. Hero
2. About Elevate
3. Domains
4. Upcoming Events
5. Legacy Preview
6. Knowledge Hub Preview
7. Challenges Preview
8. Sponsors
9. Join Elevate CTA
10. Footer

Hero

Contains:

- Elevate logo
- Main headline
- Short description
- **Explore Elevate** button
- **Explore Domains** button

Visual style:

- Dark/futuristic
- Elevate blue colors
- Gradient/glow effects
- Subtle animation
- Scroll effects

The goal is to make a strong first impression without making the page visually overwhelming.

4. About Elevate

A short section explaining:

- What Elevate is
- Why the club exists
- What we do
- What students can learn
- What kind of community we are building

Keep this section short and easy to understand.

5. Domains

Elevate has six main technical domains:

1. 🌐 Web2
2. 🧬 Web3
3. 🤖 AI / ML
4. 🛡️ Cyber Security
5. 📱 App Development

6. 🧩 Open Source

Each domain will have a card containing:

- Domain name
- Icon
- Short description
- Technologies
- [Explore Domain →](#)

Domain Detail Page

Example:

</domains/ai-ml>

Each domain page contains:

- Introduction
- About the domain
- Technologies/topics
- Projects
- Related events
- Learning resources
- Domain team (optional)
- Related challenges

Important connection:

[Domain → Events → Resources → Challenges](#)

6. Legacy

Legacy represents the history of Elevate.

Instead of just showing old team members, we want to show how Elevate has evolved over the years.

Example:

2026–27 → 2025–26 → 2024–25 → 2023–24 → Founding Era

Each Legacy Entry

Contains:

- Leader name
- Position
- Tenure/year
- Profile image
- Short bio
- Technical background/domain
- Contributions
- Projects
- Achievements
- Major events during their tenure

Experience

Desktop:

Immersive / scroll-based timeline.

Mobile:

Simple vertical timeline.

Animations can include:

- Year transitions
- Image reveals
- Timeline progress
- Achievement reveals
- Background transitions

The page must still work correctly without animations.

7. Events

Events will be divided into:

Upcoming

Events that are coming soon.

Ongoing

Events currently happening.

Past

Completed events.

Users can filter events by:

- Domain
- Year
- Event type
- Status

Event types can include:

Workshop | Seminar | Hackathon | Bootcamp | CTF | Competition | Tech Talk | Webinar | Open Source | Community

Event Detail Page

Example:

`/events/ai-workshop`

Contains:

- Event poster
- Name
- Date

- Time
- Venue
- Domain
- Status
- Description
- Speaker/organizer
- Registration
- Resources
- Recording
- GitHub link
- Gallery
- Related challenge
- Related learning resources

Before event:

[Register Now →](#)

After event:

[View Resources →](#)

8. Sponsors

The Sponsors page displays organizations and communities that support Elevate.

Sections

- Current Sponsors
- Sponsor tiers
- Community Partners
- Previous Sponsors (optional)

Each sponsor contains:

- Logo
 - Organization name
 - Tier
 - Short description
 - Website
 - Associated event/initiative
-

9. Knowledge Hub

Knowledge Hub is Elevate's learning library.

Students can find curated technical resources instead of searching through random links.

Resource Categories

-  Courses
-  YouTube
-  Documentation
-  Articles
-  Books
-  Roadmaps
-  Projects
-  Tools

Filter By Domain

- Web2
- Web3
- AI/ML
- Cyber Security

- App Development
- Open Source

Filter By Difficulty

Beginner | Intermediate | Advanced

Resource Card

Contains:

- Title
- Thumbnail
- Description
- Domain
- Resource type
- Difficulty
- Author/creator
- Tags
- External link

Example:

Machine Learning Fundamentals

AI/ML • Course • Beginner

Introduction to machine learning concepts and fundamentals.

[Open Resource →](#)

10. Challenges

Challenges allow students to apply what they learn.

They are separate from Events because they involve participation, building, competing, or submitting solutions .

Challenge Categories

-  Active
-  Upcoming
-  Past

Challenge Detail Page

Contains:

- Challenge name
- Domain
- Description
- Start date
- End date
- Rules
- Eligibility
- Prize
- Registration
- Submission
- Resources
- Leaderboard
- Results

Buttons change depending on challenge status:

Register Now →

Submit Solution →

View Leaderboard →

View Results →

11. Event → Learning → Challenge Flow

This is an important part of the website.

Example:

AI Seminar

↓

AI Learning Resources

↓

AI Challenge

↓

Submission

↓

Leaderboard

↓

Results

This means an event should not become a dead page after it finishes.

Students should be able to continue learning and participating.

12. Search

Later, we can add global search.

Example search:

React

Could return:

- Web2 Domain
- React Workshop
- React Course
- React Documentation
- React Challenge

Search should eventually cover:

- Domains

- Events
 - Resources
 - Challenges
 - Legacy
-

13. Admin Panel

Admin URL:

`/admin`

Dashboard:

`/admin/dashboard`

The club team should be able to update the website without changing frontend code.

Admin Can Manage

-  Events
-  Resources
-  Challenges
-  Legacy
-  Sponsors
-  Media
-  Announcements (future)
-  Domains

Dashboard Overview

Show:

- Upcoming events
- Active challenges
- Total events

- Total resources
 - Sponsors
 - Legacy entries
 - Recent updates
-

14. Admin — Events

Admin can:

- Create event
- Edit event
- Publish/unpublish
- Archive
- Delete
- Upload poster
- Add gallery
- Add speakers
- Add registration link
- Add recording
- Add resources
- Add winners

Events should automatically appear on the public website after publishing.

15. Admin — Knowledge Hub

Admin can:

- Add resource
- Edit resource

- Delete resource
 - Add domain
 - Add category
 - Add difficulty
 - Add tags
 - Add URL
 - Upload thumbnail
 - Publish/unpublish
-

16. Admin — Challenges

Admin can:

- Create challenge
 - Edit challenge
 - Publish/unpublish
 - Set dates
 - Add rules
 - Add prize
 - Add registration link
 - Add submission link
 - Manage leaderboard
 - Publish results
 - Archive challenge
-

17. Admin — Legacy

Admin can:

- Add leader
 - Edit leader
 - Add tenure
 - Upload image
 - Add biography
 - Add contributions
 - Add achievements
 - Add projects
 - Reorder timeline
-

18. Admin — Sponsors

Admin can:

- Add sponsor
 - Upload logo
 - Select sponsor tier
 - Add description
 - Add website
 - Connect sponsor with event
 - Activate/deactivate sponsor
-

19. Media Manager

Central location for managing:

- Event posters
- Event photos
- Leader photos

- Sponsor logos
 - Domain images
 - Resource thumbnails
-

20. Dynamic Content

Frequently changing content should NOT be hardcoded into the website.

For example:

Admin creates event → Saved → Website automatically displays event

This applies to:

- Events
- Challenges
- Resources
- Legacy
- Sponsors
- Announcements

This allows future Elevate teams to maintain the website without needing a developer for every update.

21. Connecting Everything

Pages should not exist independently.

Example:

Web3 Domain → Web3 Workshop → Web3 Resources → Web3 Challenge

Another example:

AI Workshop → AI/ML Domain → AI Resources → AI Challenge

Another:

Legacy Leader → Their Contributions → Events During Their Tenure

This is one of the most important ideas behind the website.

22. Design Style

The design should follow the existing Elevate branding.

CHECK WHATSAPP FOR COLOR PALETTE

Colors

- Deep Navy
- Blue
- Electric Blue
- Cyan
- White

Overall Feel

- Futuristic
- Technical
- Premium
- Clean
- Interactive
- Student-focused
- Community-driven

Dark mode should be the primary experience.

Light mode should also be supported.

23. Animation

Animation should depend on the page.

- Homepage → High
- Legacy → High / scroll storytelling

- Domains → Medium
- Events → Medium
- Knowledge Hub → Low
- Challenges → Medium
- Admin → Minimal

Animations should improve the experience, not make content difficult to access.

24. Responsive Design

The website must work properly on:

Desktop | Tablet | Mobile

We should adapt layouts rather than simply shrinking desktop designs.

Examples:

Desktop Legacy → immersive timeline

Mobile Legacy → vertical timeline

Desktop Domains → interactive grid

Mobile Domains → stacked/swipeable cards

Desktop Navbar → full menu

Mobile Navbar → hamburger menu

25. Website Structure

26. Development Phases

Phase 1 — Public Website

- ☐ Home
- ☐ Domains
- ☐ Domain Detail Pages

- ☐ Legacy
- ☐ Events
- ☐ Event Detail
- ☐ Sponsors
- ☐ Knowledge Hub
- ☐ Challenges
- ☐ Challenge Detail
- ☐ Join Elevate
- ☐ Mobile responsive design
- ☐ Dark/light mode

Phase 2 — Admin

- ☐ Admin authentication
- ☐ Dashboard
- ☐ Event management
- ☐ Resource management
- ☐ Challenge management
- ☐ Legacy management
- ☐ Sponsor management
- ☐ Media management

Phase 3 — Advanced Features

- ☐ Global search
- ☐ Advanced filters
- ☐ Leaderboards
- ☐ Event galleries

- ☐ Announcements
 - ☐ Member showcase
 - ☐ Project showcase
-

27. MVP — When Is Version 1 Complete?

Version 1 is ready when:

- ☐ Visitors can understand what Elevate is
 - ☐ All six domains are available
 - ☐ Each domain has its own page
 - ☐ Legacy timeline works
 - ☐ Events can be explored
 - ☐ Individual event pages work
 - ☐ Sponsors are displayed
 - ☐ Knowledge Hub works
 - ☐ Resources can be filtered
 - ☐ Challenges can be explored
 - ☐ Admin can manage events
 - ☐ Admin can manage resources
 - ☐ Admin can manage challenges
 - ☐ Admin can manage Legacy
 - ☐ Admin can manage sponsors
 - ☐ Website works properly on mobile
 - ☐ Website content can be updated without changing frontend code
-

28. Things We Need to Decide as a Team

Before development starts, finalize:

- ☐ Final logo/brand assets
 - ☐ Final website colors
 - ☐ Homepage headline
 - ☐ About Elevate content
 - ☐ Domain descriptions
 - ☐ Current and previous leadership data
 - ☐ Existing event data
 - ☐ Knowledge Hub starter resources
 - ☐ Sponsor information
 - ☐ Challenge system requirements
 - ☐ Join Elevate process
 - ☐ Social media links
 - ☐ Official contact email
 - ☐ Who gets admin access
 - ☐ Who will maintain content after launch
-

Core Product Principle

Do not design every page as a separate page. Design the connections between them.

The core ecosystem is:

DOMAIN → EVENT → LEARN → CHALLENGE → PARTICIPATE

And the historical ecosystem is:

LEADERSHIP → CONTRIBUTIONS → EVENTS → CLUB LEGACY

The final website should feel like one connected Elevate platform rather than a collection of unrelated pages.

Final Vision

When someone visits Elevate, they should be able to:

Discover → Explore → Learn → Participate → Connect

The website should preserve Elevate's past, showcase what the club is doing today, and continue growing with future Elevate teams.
